

A

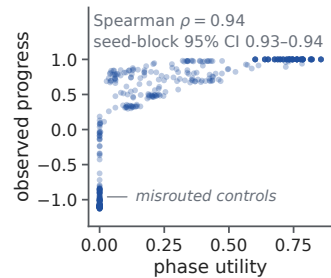

Credit-operator utility

**B**

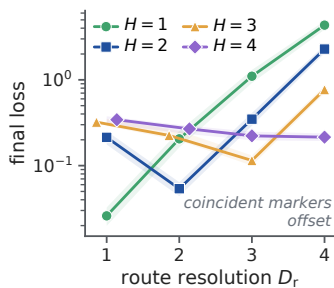

Spectral alignment

**C**

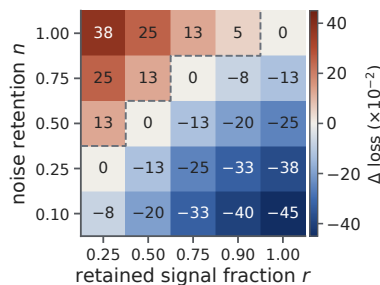

Predictive utility

**D**

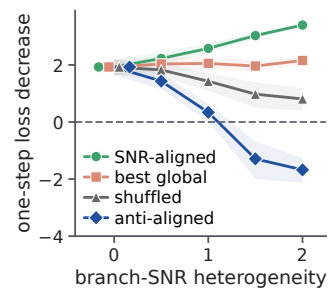

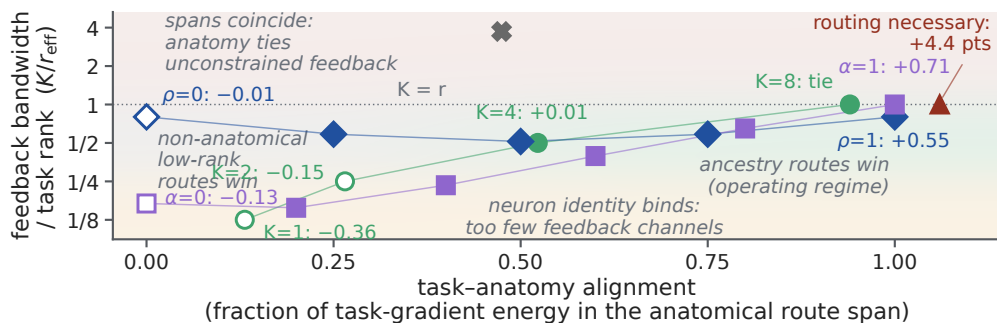

Route-resolution crossover

**E**

Projection boundary

**F**

Reliability gains

**G**Alignment $\times$ bandwidth

- Trained factorial, $K \in \{1, 2, 4, 8\}$
- ◆ Spectral sweep, $K=4$ (theory)
- MICrONS controlled, $K=8$
- ✱ Measured responses, $K=4$
- ▲ Credit reversal, $K=2$
- ancestry routes win / tie
- ancestry routes lose
