

A

Partner responses drive a passive tree

7 targets, 13 scans, 5–17 partners
per scan (69 selected)

condition-mean partner responses

 A = realized routes; c fixed or oracle; readout and bias exact, stimuli held out

credit delivery into the tree

**B**

Shared path vs similarity

**C**

Alignment near zero

**D**

Below the detection point

**E**

One input per route

**F**

Coverage falls with inputs

**G**

No gain over ridge

**H**Span, not c , is the limit
