

A

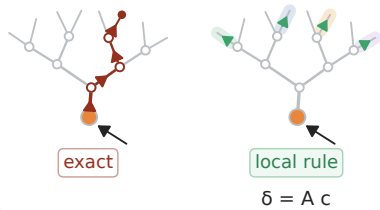

Partner responses drive a passive tree

7 targets, 13 scans, 5-17 partners per scan (69 selected)
condition-mean partner responses

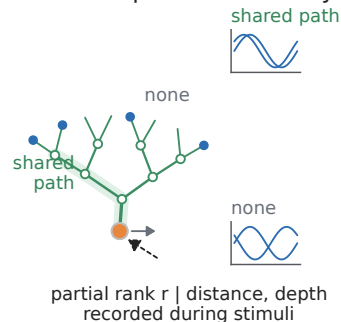

A = realized routes; c fixed or oracle; readout and bias exact, stimuli held out

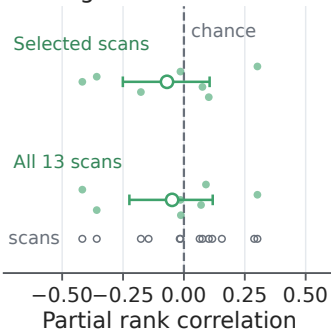

credit delivery into the tree

**B**

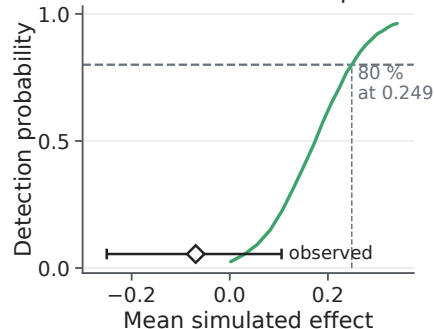

Shared path vs similarity

**C**

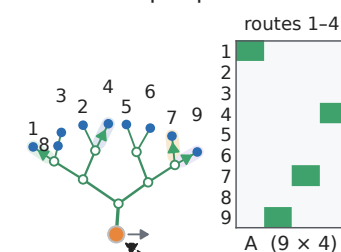

Alignment near zero

**D**

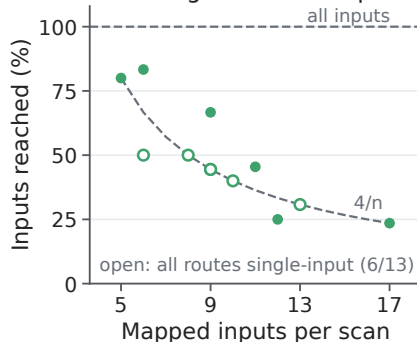

Below the detection point

**E**

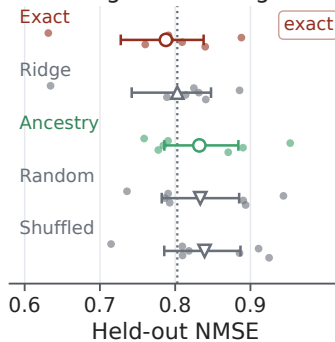

One input per route

**F**

Coverage falls with inputs

**G**

No gain over ridge

**H**

Span, not c, is the limit
