

Key

- shunting: seed mean
- raw additive: seed mean
- +— whisker: 95% seed-bootstrap interval of the mean (10,000 whole-seed draws)
- thin line, small mark: one seed (15 paired seeds per architecture)
- dashed rule: reference constant

Cohort: 128 directed [3,3] trees per network, 15 paired seeds per architecture, flattened MNIST; A at checkpoints trained with per-neuron feedback, B and C at exact-path checkpoints. Exact-path cosine in A is 1 by construction and is not drawn.
