

A

Two targets, one shared tree

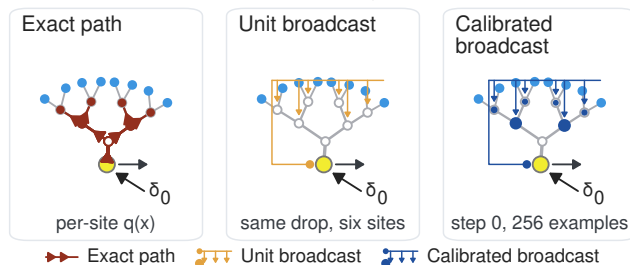

same tree, weights and examples; $l_8/4$; signs ± 0.5

B

Where each rule delivers credit

six nonsomatic sites; radius = mean |weight| over 20 seeds, 0.133–0.386

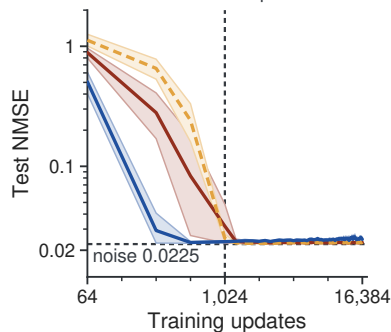

C

Pairwise: broadcast fits

frozen Adam rates

n = 20 paired seeds

D

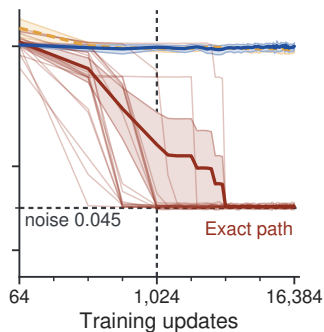

Quartic: only exact fits

3 of 20 exact seeds stall

all at floor by 4.096

unit and calibre

unit and calibrated broadcast

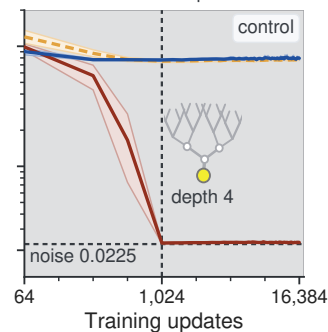

E

Nested control: depth 4

depth 4. unmatched spectrum

n = 20 paired seeds

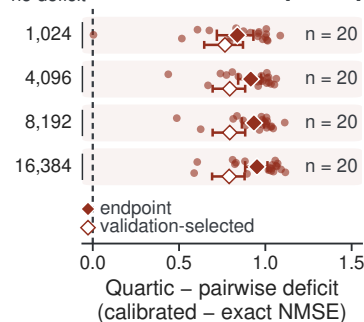

F

Larger quartic deficit

20/20 positive at every budget

no deficit

n = 20; mean [95 % CI]

G

One direction, or five

oracle fit at 1,024 updates

n = 20 seeds

H

Leaf assignment matters

tree shape, parameters fixed

n = 20; mean [95 % CI]
